

Industrial Services

## Personnel Service

planning · projecting · engineering · documenting

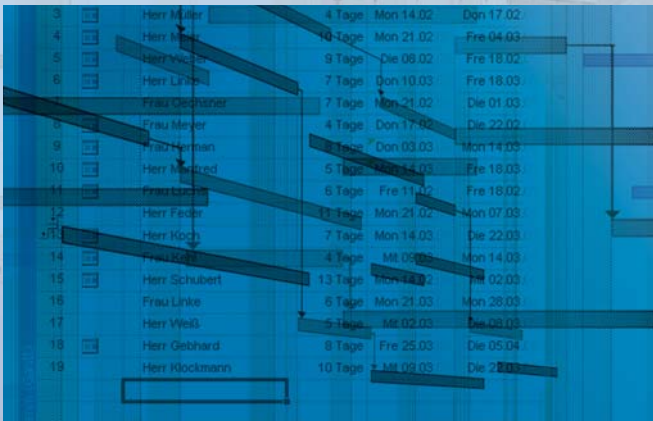

To achieve project success, personnel resources must be allocated in a manner that delivers appropriate technical expertise in a cost effective and timely manner. This can best be accomplished when organizations have flexible human resources.

Our personnel possess specialized technical knowledge and relevant experience that enables them to rapidly familiarize themselves with new projects and quickly add value to your team.

We provide the services you need, meeting the quality, schedule, and location requirements you specify.

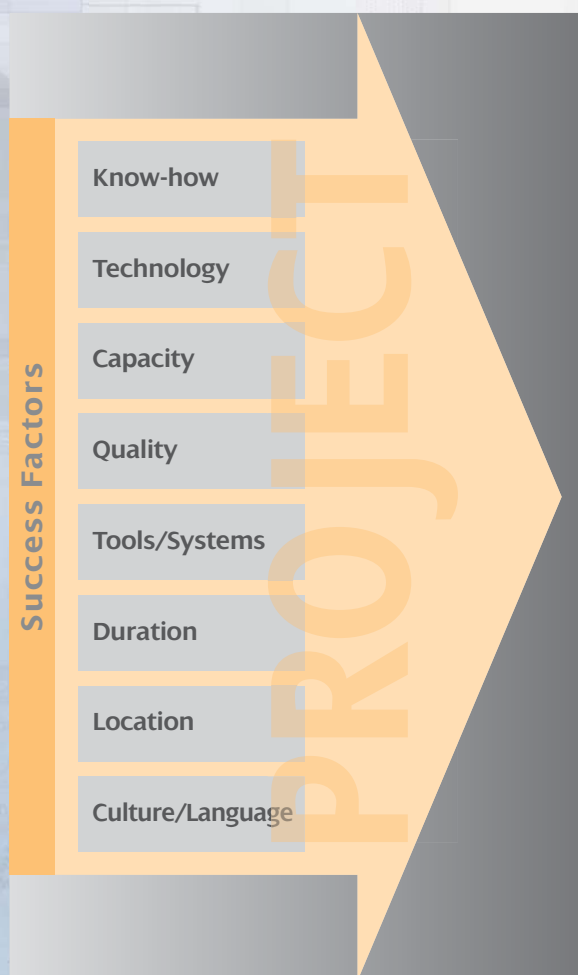

We help you to overcome personnel bottlenecks in the areas of project planning, design and development, and documentation in a more simple, secure and efficient way.

We are able to meet your requirements worldwide as a result of our staff's engineering and information technology know-how, our pool of rapidly available resources, our experience working across borders internationally, and our ability to collaborate with you through our competence centers.

It is generally possible to economically outsource approximately 40% of your engineering needs, providing greater flexibility for your business.

## Personnel Service

## Success Factors of an Engineering Project

Our staff offers competence in the following fields:

- **Automation**
- **Building Technology**
- **Electrical Engineering**
- **Installation**
- **Knowledge Management**
- **Mechanical Engineering**
- **Personnel Service**
- **Product Development**
- **Project Management**
- **Software Engineering**
- **Turnkey Projects**

### **Design and development**

Products, systems, machines, jigs and processes.

### **Project planning**

Conceptual and detailed engineering in machine building and plant engineering, as well as electrical engineering.

### **Engineering**

Products, plants, machines and jigs.

### **Programming**

Controls and drives (PLC, HMI), as well as testing and commissioning of software.

### **Documentation**

2D/3D CAD and CAE, including international standards and languages, and preparation of production and revision documents.

### **Project management**

Complete project control including technical, schedule, budget, quality, and administrative performance.

### **Commissioning**

Installation planning, construction management, supervision, and schedule coordination. Individual function, integration, and production testing.

### **Technical Documentation**

Creation of detailed design documents, record (as-built) drawings, operating and maintenance procedures and manuals, spare parts lists, and associated documentation.
